SUBJECT INDEX

Activated reactive evaporation, 29
Adherence, hardness, and density of optical thin films, stress, 84
Air Force and DoD needs for a systematic coating science and technology base, requirements and speculations about, 12
Architectural glass coatings, performance and sputtering criteria of modern, 65
Assemblies, spatially uniform detector, 175

Calorimetry, experimental and theoretical considerations in thin film laser, 156
Carbon thin films from ion activated techniques, diamondlike, 117
Chemical vapor deposition: applying the technology to optics, 123
Coated optics, 3.8 micron interferometry for testing, 144
Coating equipment, vacuum roll, 52
Coating of indium tin oxide onto large area flexible substrates, continuous, 61
Coating, ion beam applications for optical, 101
Coating of optical thin film, new techniques for roll, 46
Coating science and technology base, requirements and speculations about Air Force and DoD needs for a systematic, 12
Coatings as a function of temperature, techniques of measurement of reflectance and transmittance of thin film, 167
Coatings for laser fusion, 2
Coatings, performance and sputtering criteria of modern architectural glass, 65
Continuous coating of indium tin oxide onto large area flexible substrates, 61
Covers by a plasma-activated source, fabrication of integral solar cell, 132

Density of optical thin films, stress, adherence, hardness, and, 84
Design of a prototype semi-continous roll coater for optical multilayers, 40
Detector assemblies, spatially uniform, 175
Diamondlike carbon thin films from ion activated techniques, 117
DoD needs for a systematic coating science and technology base, requirements and speculations about Air Force and, 12

Ellipsometry infrared, 149
Emittance measurements of thin films, spectral, 163
Evaporation, activated reactive, 29
Experimental and theoretical considerations in thin film laser calorimetry, 156

Fabrication of integral solar cell covers by a plasma-activated source, 132
Films, production techniques for high volume sputtered, 74
Films, properties of ion assisted deposited silica and titania, 93
Filters at temperatures down to 4 deg K, measurement of infrared multilayer, 180

SUBJECT INDEX

Activated reactive evaporation, 29
Adherence, hardness, and density of optical thin films, stress, 84
Air Force and DoD needs for a systematic coating science and technology base, requirements and speculations about, 12
Architectural glass coatings, performance and sputtering criteria of modern, 65
Assemblies, spatially uniform detector, 175

Calorimetry, experimental and theoretical considerations in thin film laser, 156
Carbon thin films from ion activated techniques, diamondlike, 117
Chemical vapor deposition: applying the technology to optics, 123
Coated optics, 3.8 micron interferometry for testing, 144
Coating equipment, vacuum roll, 52
Coating of indium tin oxide onto large area flexible substrates, continuous, 61
Coating, ion beam applications for optical, 101
Coating of optical thin film, new techniques for roll, 46
Coating science and technology base, requirements and speculations about Air Force and DoD needs for a systematic, 12
Coatings as a function of temperature, techniques of measurement of reflectance and transmittance of thin film, 167
Coatings for laser fusion, 2
Coatings, performance and sputtering criteria of modern architectural glass, 65
Continuous coating of indium tin oxide onto large area flexible substrates, 61
Covers by a plasma-activated source, fabrication of integral solar cell, 132

Density of optical thin films, stress, adherence, hardness, and, 84
Design of a prototype semi-continous roll coater for optical multilayers, 40
Detector assemblies, spatially uniform, 175
Diamondlike carbon thin films from ion activated techniques, 117
DoD needs for a systematic coating science and technology base, requirements and speculations about Air Force and, 12

Ellipsometry infrared, 149
Emittance measurements of thin films, spectral, 163
Evaporation, activated reactive, 29
Experimental and theoretical considerations in thin film laser calorimetry, 156

Fabrication of integral solar cell covers by a plasma-activated source, 132
Films, production techniques for high volume sputtered, 74
Films, properties of ion assisted deposited silica and titania, 93
Filters at temperatures down to 4 deg K, measurement of infrared multilayer, 180

Flexible substrates, continuous coating of indium tin oxide onto large area, 61
4 deg K, measurement of infrared multilayer filters at temperatures down to, 180
Fusion, coatings for laser, 2

Glass coatings, performance and sputtering criteria of modern architectural, 65

Hardness, and density of optical thin films, stress, adherence, 84
High volume sputtered films, production techniques for, 74

Indium tin oxide onto large area flexible substrates, continuous coating of, 61
Infrared ellipsometry, 149
Infrared multilayer filters at temperatures down to 4 deg K, measurement of, 180
Integral solar cell covers by a plasma-activated source, fabrication of, 132
Interferometry for testing coated optics, 3.8 micron, 144
Ion activated techniques, diamondlike carbon thin films from, 117
Ion assisted deposited silica and titania films, properties of, 93
Ion beam applications for optical coating, 101

Large area flexible substrates, continuous coating of indium tin oxide onto, 61
Laser calorimetry, experimental and theoretical considerations in thin film, 156
Laser fusion, coatings for, 2

Measurement of infrared multilayer filters at temperatures down to 4 deg K, 180
Measurement of reflectance and transmittance of thin film coatings as a function of temperature, techniques of, 167
Microstructure of optical thin films, 21
Modern architectural glass coatings, performance and sputtering criteria of, 65
Multilayer filters at temperatures down to 4 deg K, measurement of infrared, 180
Multilayers, design of a prototype semi-continuous roll coater for optical, 40

New techniques for roll coating of optical thin film, 46

Optical coating, ion beam applications for, 101
Optical multilayers, design of a prototype semi-continuous roll coater for, 40
Optical thin film, new techniques for roll coating of, 46
Optical thin films, microstructure of, 21
Optical thin films, recent developments in reactively sputtered, 105
Optical thin films, stress, adherence, hardness, and density of, 84
Optics, chemical vapor deposition: applying the technology to, 123
Optics, 3.8 micron interferometry for testing coated, 144

Performance and sputtering criteria of modern architectural glass coatings, 65
Plasma-activated source, fabrication of integral solar cell covers by a, 132
Production techniques for high volume sputtered films, 74
Properties of ion assisted deposited silica and titania films, 93
Prototype semi-continuous roll coater for optical multilayers, design of a, 40

Reactive evaporation, activated, 29
Reactively sputtered optical thin films, recent developments in, 105
Recent developments in reactively sputtered optical thin films, 105
Reflectance and transmittance of thin film coatings as a function of temperature, techniques of measurement of, 167
Requirements and speculations about Air Force and DoD needs for a systematic coating science and technology base, 12
Roll coater for optical multilayers, design of a prototype semi-continuous, 40
Roll coating equipment, vacuum, 52
Roll coating of optical thin film, new techniques for, 46

Science and technology base, requirements and speculations about Air Force and DoD needs for a systematic coating, 12
Semi-continuous roll coater for optical multilayers, design of a prototype, 40
Silica and titania films, properties of ion assisted deposited, 93
Solar cell covers by a plasma-activated source, fabrication of integral, 132
Spatially uniform detector assemblies, 175
Spectral emittance measurements of thin films, 163
Sputtered films, production techniques for high volume, 74
Sputtering criteria of modern architectural glass coatings, performance and, 65
Stress, adherence, hardness, and density of optical thin films, 84
Substrates, continuous coating of indium tin oxide onto large area flexible, 61
Systematic coating science and technology base, requirements and speculations about Air Force and DoD needs for a, 12

Techniques of measurement of reflectance and transmittance of thin film coatings as a function of temperature, 167
Technology to optics, chemical vapor deposition: applying the, 123
Technology, requirements and speculations about Air Force and DoD needs for a systematic coating science and, 12
Temperature, techniques of measurement of reflectance and transmittance of thin film coatings as a function of, 167
Temperatures down to 4 deg K, measurement of infrared multilayer filters at, 180
Theoretical considerations in thin film laser calorimetry, experimental and, 156
Thin film coatings as a function of temperature, techniques of measurement of reflectance and transmittance of, 167
Thin film laser calorimetry, experimental and theoretical considerations in, 156
Thin film, new techniques for roll coating of optical, 46
Thin films from ion activated techniques, diamondlike carbon, 117
Thin films, microstructure of optical, 21
Thin films, recent developments in reactively sputtered optical, 105
Thin films, spectral emittance measurements of, 163
Thin films, stress, adherence, hardness, and density of optical, 84
Titania films, properties of ion assisted deposited silica and, 93
3.8 micron interferometry for testing coated optics, 144
Transmittance of thin film coatings as a function of temperature, techniques of measurement of reflectance and, 167

Vacuum roll coating equipment, 52
Vapor deposition: applying the technology to optics, chemical, 123
